LEDER

Car Collection

General technical information

- Production in accordance with the latest quality standards ISO/TS 16949 (EN ISO 9001) and environmental standards according to EN ISO 14001
- Size of hides = approx. 5 m² and above.
- Substance: 1.1 mm (± 0.2 mm)
- Average weight: 800 g/m²
- Special finish to meet the current standard of the automotive industry (as specified below).
- Each and every production batch is tested according to these specifications.

Upon request we gladly provide a test report on each article [per production batch] indicating the required standard values and the actual test results. Please contact your local agent (sales representative) or our quality assurance department directly by e-mail (see our e-mail address overleaf – subject: QS-test report)

Test criteria:	Standard	result
Tensile strength:	DIN 53328	complies
Elongation at break:	DIN 53328	complies
Tear strength:	DIN 53329	complies
Fastness to rubbing:	DIN EN ISO 11640	complies
Crock meter:	DIN EN ISO 105-X12	complies
Resistance to U.V.:	VDA 75202	complies
Abrasion resistance:	ASTM D 1044	complies
Flexometer:	DIN 53351	complies
Adhesion of finish:	ISO 11644	complies
Combustibility:	DIN 75200	complies
Flammability:	BS 5852 schedule 5, part 1, furniture und furnishings [fire] (safety) regulation 1988	complies

Care / maintenance

Easy to care / maintain due to special protective finish.
For further info please see our pamphlet "All about leather".

Quality: I've got you under my skin

Quality is an attitude. It determines the careful selection of raw materials.
Shapes the whole course of processing. And naturally includes the special relationship
with the customer. Today, Wollsdorf Leder counts among Europe's leading leather manufacturers.
We deliver our high-quality products to over 30 countries worldwide.
To customers who value our reliability and co-operation.
To partners who share our motto "Quality: I've got you under my skin".

Nature goes automobile

Automobile leather from Wollsdorf Leder combines the successful synthesis of character,
naturalness and individuality of leather on the one hand, with the extreme technical demands
of the automotive industry on the other. In order to exploit fully the technical potential of leather,
we rely on resolute and continuous development. We work closely with development and
design departments of leading car makers.

Leadership is rewarded

Wollsdorf Leder has a highly developed quality assurance system and a modern testing laboratory
and is thus in the position to monitor and guarantee strict quality requirements -
such as even those found in the automotive industry. As early as 1993 Wollsdorf Leder
was the first European leather manufacturer to be awarded the ISO 9001 quality certificate.
And since 2001, we have held the ISO/TS 16949 certificate.
This time the first leather manufacturer in the world to do so.

Car Leather "Cool"™

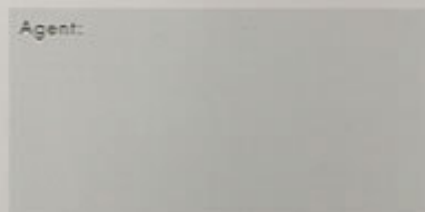

It is known that sun rays are absorbed by dark leather which results in a hot and unpleasant leather
surface. A completely new technology can now inhibit this process. By using special pigments a so-
called "solar-reflective" effect can be achieved; in other words, 80 to 90% of sun rays are reflected
and not absorbed. As a result, the leather surface no longer heats up but remains pleasantly "cool".
And at the same time, durability of the leather is enhanced.
We and our partners would be happy to give you more detailed information about this on request.
